

K6

Minimalist design, maximum safety

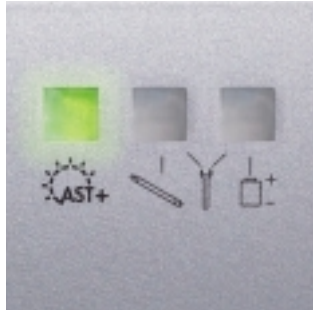

The design of the K6-emergency lighting luminaires has been reduced to essentials. It's sleek streamline minimalist design integrates effortlessly into the architecture. All the detailed design – such as the embedded joints between the front panel and the housing equates to a perfect finish. The K6 is distinguished by its extra flat form.

ETAP

"Minimalism is not a trend or a fashion phenomenon, it is a philosophy. Omit that which is superfluous and uncover the essence."

Christine Conix (Conix Architecten) and
Axel Enthoven (Enthoven Associates)

Automatic self-testing

Slide the luminaire into the bracket

Simple lamp replacement

High ETAP-quality

As you would expect from ETAP, the K6 electronics are highly reliable. The luminaire is equipped with automatic self-testing; it can also – as an option – be connected to the central control system ESM (ETAP Safety Manager). The four-year guarantee is additional proof of the high degree of operational reliability – something which is essential to emergency lighting.

ETAP reduces installation time

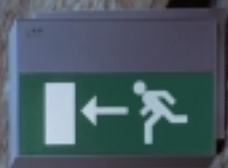

Never before was it possible to install our emergency luminaire so quickly. Once the mounting brackets have been fixed in place and the mains wire connected all that is required is to plug in the flex and slide the luminaire into the bracket, no need for tools, no need to open the luminaire. Simple installation and the wiring is always stored out of sight. And it makes it possible to delay installation until the dust forming construction work is completed.

Simple lamp replacement

Lamp replacement can be simply carried out through the front panel, no need to remove the whole fitting.

20 % saving in installation time

A K6-LUMINAIRE FOR EVERY SITUATION

It is of primary importance that emergency lighting performs adequately in every type of space. This issue has been seriously addressed by the comprehensive K6-series. Thanks to the matching mounting brackets, you can install your emergency lighting in the location of your choice. A great deal of attention has also been paid to an even illumination of the printed sign: stylish and easily recognisable.

Wall luminaire:
single-sided sign

Suspended luminaire:
single or double-sided sign

Wall luminaire:
escape route lighting

Luminaire for ceiling mounting:
escape route lighting

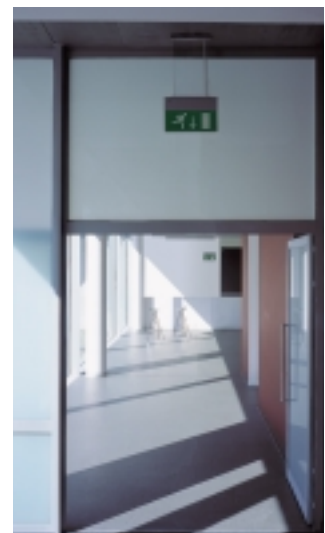

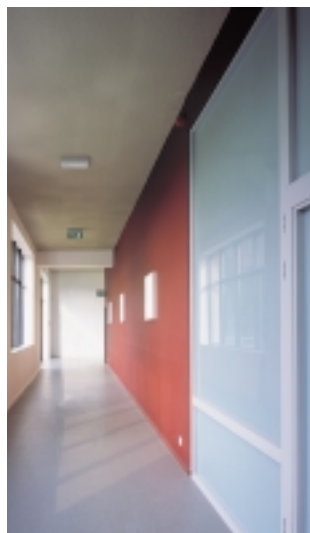

Luminaire for ceiling mounting:
single or double-sided sign

At a right angle to the wall:
