All around great lighting

ALTER SOFTLIGHT:

A PLEASANT WORKING ENVIRONMENT CONCEPT

Now that ALTER of France is part of the ETAP group, a full range of Softlight products is available to our customers.

ALTER Softlight luminaires merge into the ceiling and are a 'soft' light source. You see where the light is coming from, but it does not interfere with your task.

The uniform lighting creates a pleasant, calm and comfortable working atmosphere.

A WELL-THOUGHT OUT DESIGN

ALTER Softlight luminaires completely shield the lamp, thus eliminating direct glare. Uniquely shaped reflectors direct the light where it is needed. The uniform light distribution provides a balanced lighting of the horizontal and vertical planes and guarantees the avoidance of high contrasts that cause distraction glare and shadows and bright spots are a thing of the past.

ALTER Softlight luminaires diffuse light outward at relatively high angles which models people and their faces in a more sympathetic and less harsh manner.

The special white lacquer coating on the reflectors results in the output of ALTER Softlight being one of the best in its class.

INTEGRATED TECHNIQUE

Special details have been incorporated in the ALTER Softlight luminaires. For instance, the shielding of the light source has an aperture for natural ventilation to keep the luminaire dust free. Lamps can easily be replaced by clicking open the lamp shielding.

ETAP can supply ALTER Softlight luminaires with integrated air-handling thus eliminating the need for separate air vents in the ceiling. ETAP's ELS light control system takes advantage of daylight and can save up to 55% on your power consumption. Movement dependent light control systems can also be built in. Options such as an integrated emergency unit or an attenuator for acoustic dampening in recessed luminaires are also available.

Aperture for natural ventilation

Lamp replacement made easy by clicking open the lamp shielding

Saving energy with ETAP's ELS light control system

CREATIVE LIGHTING DESIGN

The ETAP range has been extended with the ALTER Softlight series and offers a wide choice of recessed, surface-mounted luminaires, suspended luminaires, uplights and luminaries for ambient lighting. The understated design, the subtle play of textures and the excellent detail and finish allow you to create a unique atmosphere, as a design feature or to highlight certain areas of the space.

In addition to the standard range ETAP ALTER offer to integrate your own design or concept into the luminaires, design fittings for your preferred ceiling and work with you to satisfy other specific requirements.

Luminaires complementing architecture

- Uniform lighting for light spaces
- Uniquely shaped reflectors for a uniform light distribution
- Avoids disturbing contrasts
- Complete shielding of the lamp: no direct glare
- High output
- Dust free luminaire thanks to natural ventilation
- Extensive range
- Meeting the demand for bespoke products
