

K5

ETAP 

"Less is more"

K5 is discreet in any type of ceiling and perfectly finished.

Less luminaires

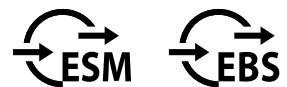

The K5 luminaires are equipped with a wide-angle reflector and an 8 W fluorescent lamp. That way, you can achieve the required luminous intensity with a minimum of luminaires. Taking the EN1838 (1 lux on the escape route) into account, you can mount K5 luminaires with a normal lumen output up to 13,5 m apart (at a standard height of 2,8 m). For luminaires with an increased lumen output, the distance between the luminaires can even be up to 15,3 m. Also for anti-panic lighting a wide-angle distribution is guaranteed by which 1 luminaire is sufficient to provide 0,5 lux on a surface of 150 m².

Signage – perfectly illuminated

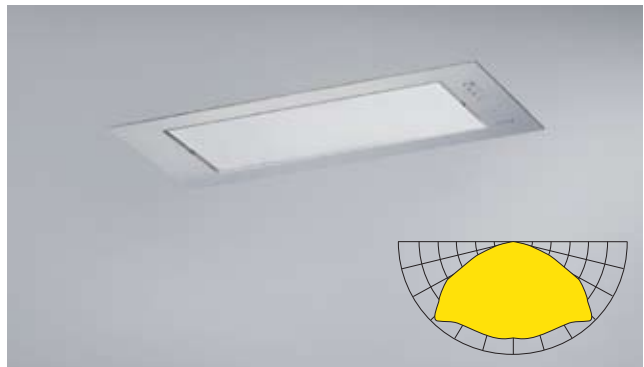

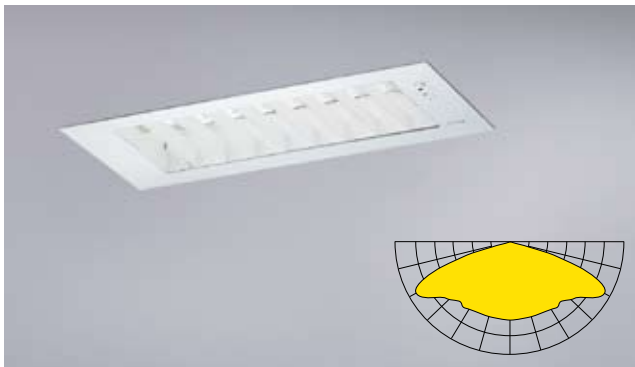

Thanks to the well thought-out light distribution, the signs are perfectly even illuminated, in accordance with the European standard. The distance of recognition is 26 m. At a mounting height of 2,8 m, the luminaire provides 5 lux on the floor, which is sufficient for a proper lighting of stairs or fire extinguisher.

Complete product range

With K5 you can cover the emergency lighting of the whole project with one single recessed design. The K5 series contains a complete emergency lighting range for signage, escape route and anti-panic lighting. K5 is available either as a self contained luminaire (with built-in battery set) or for central emergency supply. Each non-maintained K5 luminaire incorporates an automatic self-test function according to the latest European standards. K5 is available in 1 or 3 hour duration. All versions are available in white (RAL9003) and white aluminium (RAL9006).

Through the wide angle of light distribution, fewer luminaires are required for escape route and anti-panic lighting.

Perfect lighting up of the pictogram

User friendly

The luminaire can be opened in 1 action, which makes the replacement of the lamp a matter of seconds.

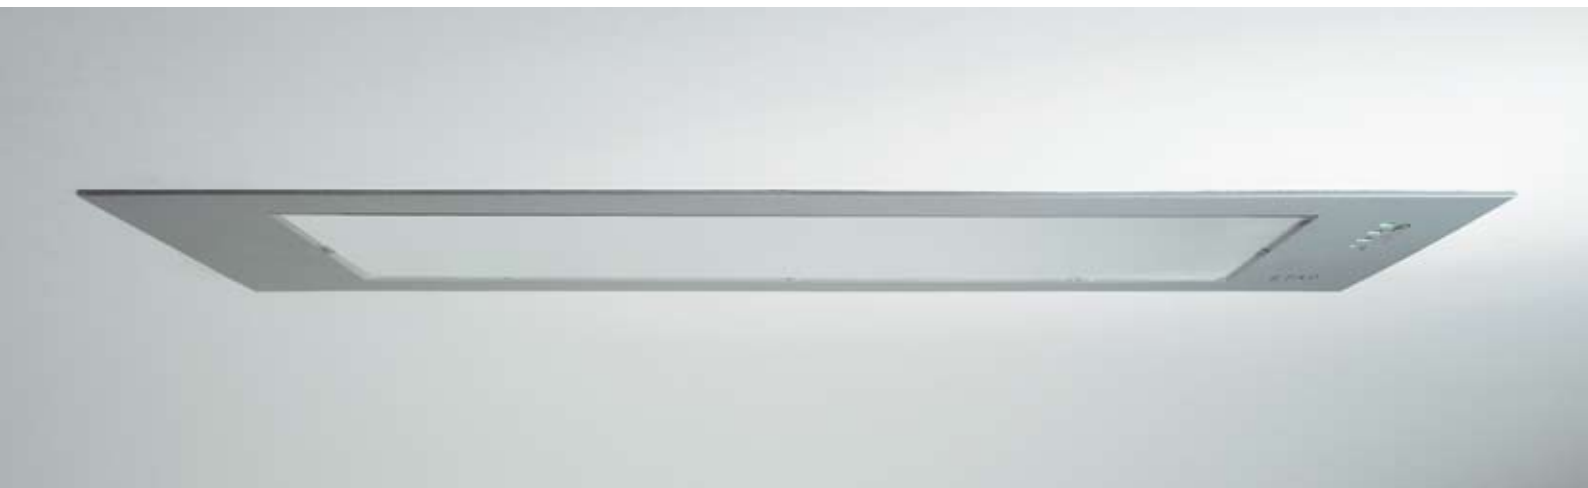

The plexi plate – hung on transparent hooks – swings out to 180°. Therefore it is very sturdy, impact-resistant and easy to replace.

Thanks to a special mounting system, the K5 can be mounted easily if you don't have access above the ceiling.

Environmental friendly

The K5 non-maintained luminaires can be equipped with the environmental friendly NiMH batteries. These batteries are 50% smaller than NiCd-batteries and can easily be recycled. NiMH-batteries are long-life thanks to an efficient charging process, which reduces the daily charging time to merely one hour. The metal housing can easily be recycled.
