EXCELLENT LIGHTING, SAVING ENERGY

U5-T0

Now also dust- and waterproof

ETAP is extending its range of luminaires with high protection rating (IP65) with a series of recessed luminaires for non-industrial applications. The ideal solution for medical rooms, cleanrooms and laboratories.

Advanced reflector technology

The new luminaires are based on the U5 range of recessed luminaires. With U5, you can light your room with minimum energy usage and maximum lighting comfort. thanks to the optimised shape of the reflector, the EQUILUM® baffles, and the use of HRSilver™ high reflection aluminium.

With high protection rating

The U5 recessed luminaires are now also available with an IP65 protection rating, which guarantees a high degree of dust and water protection. The new series has a flat bottom side, which prevents the accumulation of dirt and facilitates cleaning. An ingenious mechanism for opening and closing the glass cover plate enables easy maintenance.

An ingenious mechanism for opening and closing the glass cover plate enables easy maintenance.

IP65 = dustproof and splashproof. The IP designation (International Protection Rating) indicates the degree of protection of electrical equipment against damage due to use in so-called hostile environments and against possible hazards for the user. The IP designation consists of two digits. The first digit indicates the degree of protection against the ingress of objects and dust, the second digit the degree of protection against moisture. IP65 means: dust and waterjet proof luminaire.

The typical shape of the EQUILUM® baffles ensures high visual comfort.
